

BeyondTrust and HYPR

Protect access and management of privileged accounts with the strongest, phishing-resistant MFA

Access rights are essential for your workforce to effectively perform tasks. They enable applications, systems, and assets to function smoothly. However, granting admin rights and elevated privileges, even temporarily, can open up entry points for attackers to infiltrate and escalate their control of your systems. With privileged credentials, cyber-adversaries effectively become insiders, able to move around at will to achieve their goal. HYPR works with BeyondTrust privileged access management (PAM) solutions to add a crucial level of protection to privileged accounts.

The HYPR | BeyondTrust Integration

The HYPR integration with BeyondTrust combines the industry-leading passwordless MFA with BeyondTrust's leading integrated PAM platform to provide the highest level of assurance that only legitimate, authorized users gain privileged access to privileged accounts.

Strengthen Security Posture: HYPR incorporates the strongest phishing-resistant authentication into BeyondTrust's intelligent identity and access security to ensure that privileged accounts remain protected at all times. Reduce your attack surface, cut risk of unauthorized access and credential compromise, and enforce strong, policy-based authentication wherever your users are, online or off.

Streamline User Experience: With passwordless MFA provided by HYPR, users can seamlessly, conveniently and securely access privileged accounts, without ever using a password. This both improves user satisfaction and reduces the IT burden for password support issues, boosting productivity across the organization.

Strengthen and Refine Access Control: Implement more granular and adaptive access controls so that users only gain access to the resources they need based on their roles and responsibilities. The integration facilitates dynamic and context-aware access decisions, reducing the likelihood of unauthorized access and minimizing the impact of potential security breaches.

HYPR | BeyondTrust Solution Key Benefits

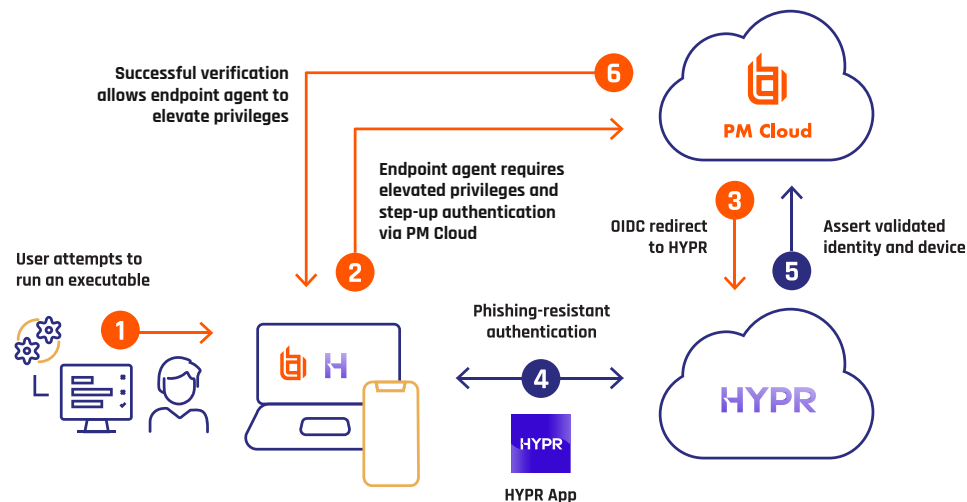

- Give legitimate, authorized users fast, secure passwordless access
- Prevent credential phishing and account takeover
- Secure remote and offline access
- Anchor Zero Trust initiatives with easy to deploy and use NIST AAL3 level authentication security
- Enforce strong, policy-based authentication for privileged access

Endpoint Privilege Management for Windows, Mac, and Linux Integration

BeyondTrust Endpoint Privilege Management (EPM) combines privilege management and application control to granularly enforce least privilege across Windows, macOS and Linux endpoints. By integrating HYPR, you can make your PAM processes even more secure and fine-tuned, while removing unnecessary friction.

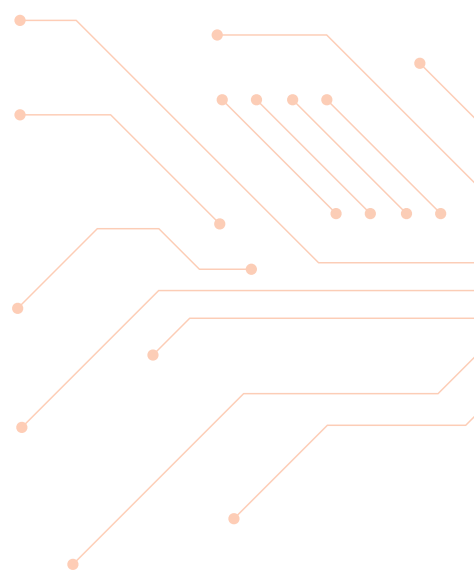

Enforce step-up to the strongest phishing-resistant authentication in order for users to gain elevated privileges to run a command or access an application. HYPR eliminates the potential to circumvent security controls, ensuring only authorized users on trusted devices can access privileged systems.

How the HYPR and BeyondTrust EPM Integration Works

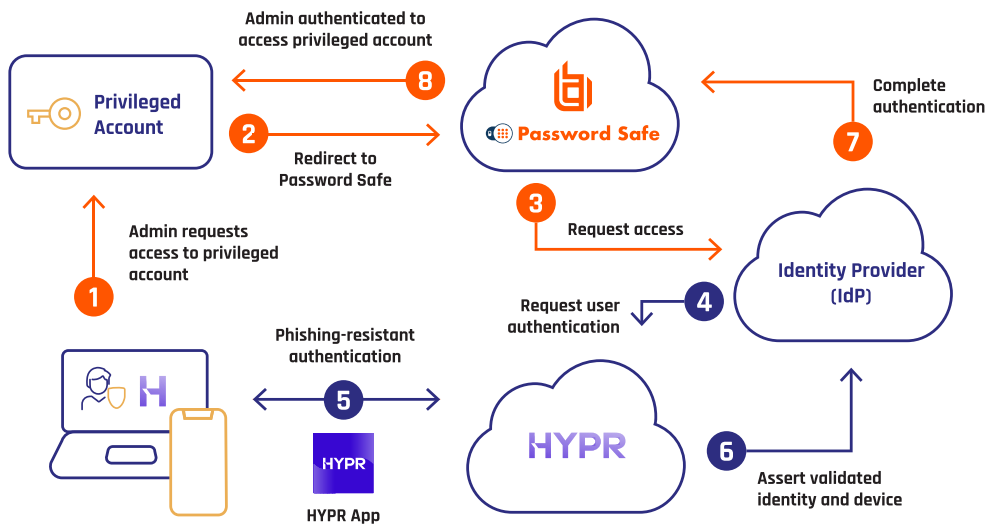

Password Safe Integration

BeyondTrust Password Safe automates discovery, onboarding, management, and auditing of all privileged accounts credentials (privileged passwords, SSH keys, DevOps secrets, etc.). With HYPR, access is protected by strong public-key cryptography bound to trusted devices. This ensures that only trusted administrators, using authorized and secure devices gain access to the most important accounts.

How the HYPR and BeyondTrust Password Safe Integration Works

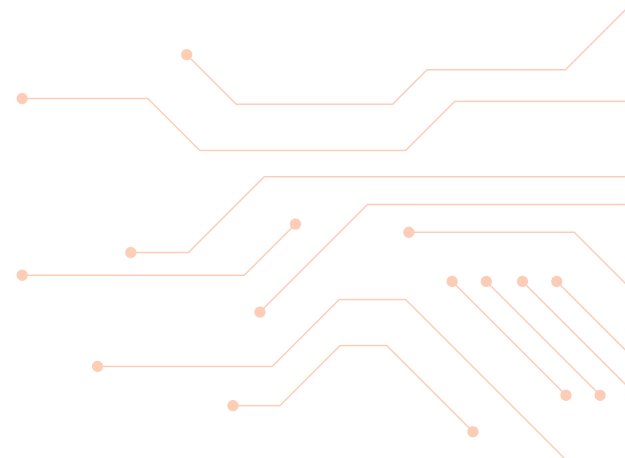

Integrations to Protect Remote Users

Privilege Remote Access Integration

BeyondTrust Privilege Remote Access provides Zero Trust remote access for the cloud and empowers IT teams to control, manage, and audit remote privileged access by authorized employees, contractors, and vendors – no VPN required. HYPR integrates seamlessly with BeyondTrust to protect remote access with easy-to-use phishing-resistant authentication so that only trusted users gain entry to your systems and services.

Remote Support Integration

BeyondTrust Remote Support gives help desk teams the ability to quickly and securely access and fix any remote device, on any platform, with a single solution. With HYPR, ensure that helpdesk teams can log in quickly and securely, so that authorized personnel can provide timely remote support.

Solution Features and Benefits

The HYPR | BeyondTrust partnership delivers significant value to organizations and their users.

- Secure access to BeyondTrust password management tools with phishing-resistant multi-factor authentication, based on FIDO passkeys standards
- Protect privileged accounts with advanced passwordless MFA that stops credential phishing, MitM attacks, MFA bombing (push notification attacks) and other attacks that defeat traditional MFA
- Provide a consistent, frictionless login experience for authorized users across devices and platforms
- Get the flexibility to choose between hardware or software-based FIDO Certified authentication
- Secure remote and offline access
- Accelerate Zero Trust initiatives with easy to deploy and use NIST AAL3 level authentication security
- Define policies that only allow specific users or devices to have access to PAM accounts.
- Enforce strong authentication when privileges on endpoints are elevated

About HYPR

HYPR creates trust in the identity lifecycle. HYPR Identity Assurance provides the strongest end-to-end identity security for your workforce and customers, combining phishing-resistant passwordless authentication with adaptive risk mitigation, automated identity verification and a simple, intuitive user experience. HYPR's solutions have been independently validated to return a 324% ROI.

About BeyondTrust

BeyondTrust is the worldwide leader in intelligent identity and access security, enabling organizations to protect identities, stop threats, and deliver dynamic access. We offer the only platform with both intelligent identity threat detection and a privilege control plane that delivers zero-trust based least privilege to shrink your attack surface and eliminate security blind spots.
